---	----	-------	--------	-------	---

1. With regard to the elements of the international application (Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)): Description, Pages as originally filed 1-15 Claims, Numbers as originally filed 1-20 **Drawings, Sheets** as originally filed 1/4-4/4 2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item. These elements were available or furnished to this Authority in the following language: the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)). the language of publication of the international application (under Rule 48.3(b)). the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3). 3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing: contained in the international application in written form. filed together with the international application in computer readable form. furnished subsequently to this Authority in written form. furnished subsequently to this Authority in computer readable form. The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished. The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished. 4. The amendments have resulted in the cancellation of:

5. 🗆	This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)).
	(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to the

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-35

No: Claims

Inventive step (IS) Yes: Claims 1-35

No: Claims

Industrial applicability (IA) Yes: Claims 1-35

No: Claims

2. Citations and explanations

see separate sheet

#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents: l.

D1: DE 198 40 017 A (FUJI PHOTO FILM CO LTD) 4 March 1999 (1999-03-04)

D2: US-A-5 646 786 (KURTZ ANDREW F ET AL) 8 July 1997 (1997-07-08)

D3: US-A-5 825 552 (DEBESIS JOHN R ET AL) 20 October 1998 (1998-10-20)

D4: US-A-6 089 719 (LIN SHANG-YI) 18 July 2000 (2000-07-18)

- Document D1, which is considered to represent the most relevant state of the art, u. discloses (col. 10, l. 23 - col. 11, l. 16; fig. 6) a light illumination apparatus from which the subject-matter of claim 1 differs in that at least two spatial light modulators and associated light emitters are used for illumination of the illumination surface, whereas the apparatus known from D1 uses three primary light sources emitting single light beams which are modulated by acoustooptic, electrooptic or magnetooptic modulators and subsequently scanned over the illumination surface.
- The subject-matter of claim 1 is therefore new (Article 33(2) PCT), as are the BOO. corresponding methods of illumination of claims 32 and 35.
- The problem to be solved by the present invention may be regarded as how to IV. decrease the required time for scanning a given area of an illumination surface.

The solution to this problem proposed in claims 1, 32 and 35 of the present application is considered as involving an inventive step (Article 33(3) PCT) for the following reasons:

None of the cited documents discloses or suggests the use of two or more spatial light modulators (SLM) in a light illumination apparatus. As pointed out above, D1 does not at all mention the use of a SLM. Documents D2 and D3 describe optical systems for illuminating a multi-element SLM from a multi-emitter laser array and give no hint on using multiple SLMs in a light illumination apparatus. Document D4 discloses a projecting device comprising three SLMs for another purpose: The three SLMs generate three primary images (red, blue, green) which are to be superposed by a

# INTERNATIONAL PRELIMINARY International application No. PCT/DK 03/00237 EXAMINATION REPORT - SEPARATE SHEET

beam combining unit. Further, the SLMs of D4 do not each have an associated light emitter arranged therewith and the projecting device does not comprise means for performing a relative movement between the "exposure head" (10) and the illumination surface (24).

Therefore, on the basis of said documents a skilled person is not obviously led to the subject matter of the present application.

Claims 2-31 and 33-34 are dependent on claims 1 and 32, respectively, and as such also meet the requirements of the PCT with respect to novelty and inventive step.
